Intermediate Data Scientist Visual Studio Code

Data exploration and analysis is at the core of data science. Data scientists require skills in languages like Python to explore, visualize, and manipulate data.

Learning objectives

In this module, you will learn:

- Common data exploration and analysis tasks.
- How to use Python packages like NumPy, Pandas, and Matplotlib to analyze data.

[Start >](#)[⊕ Save](#)

Prerequisites

- Knowledge of basic mathematics
- Some experience programming in Python

This module is part of these learning paths

[Create machine learning models](#)[Foundations of data science for machine learning](#)
