Intermediate Data Scientist Visual Studio Code

Classification is a kind of machine learning used to categorize items into classes.

Learning objectives

In this module, you'll learn:

- When to use classification
- How to train and evaluate a classification model using the Scikit-Learn framework

Prerequisites

- Basic mathematical concepts
- Programming with Python

This module is part of these learning paths

Create machine learning models

Foundations of data science for machine learning

Introduction

2 min

What is classification?

5 min

Exercise - Train and evaluate a classification model 8 min

Evaluate classification models

4 min

Exercise - Perform classification with alternative metrics

10 min

Create multiclass classification models

4 min

Exercise - Train and evaluate multiclass classification models

10 min

Knowledge check

3 min

Summary

1 min
